

Just like with the City Center, all aspects of the Earthbag Village (and all other villages) are being open sourced specifically so others can easily replicate our designs or build their own creations using our designs for inspiration. The video tutorials, web-based tutorials, printable tutorials, ongoing FAQ updates, online problem solving guides, and database for sharing the implementations and evolutions of others will cover all structural details, plumbing, electrical, HVAC, installation, maintenance, materials acquisition, labor/time investment details, tools and equipment needs, licensing and permitting, and more. Here are some examples of this village's components included in this:
