The Straw Bale Village is the second village that will be built and it will provide and open source a diversity of social, recreational, and community spaces. The theme of this village is “Modularly-Expandable Community Housing” with eleven planned recreational spaces and a focus on family-oriented social and recreational use. The complete structure is designed with multiple options for expansion and living units are easily modifiable to connect or separate rooms to create larger or smaller homes to meet evolving community and resident family needs.
